

## Houston Color Factory Press Release

11.05.2019

Impact Lighting's Epic Sky Division helped NASA artists collaborate with Houston's Color Factory in its interactive exhibit by creating a galaxy themed room surrounded by a large ball pit containing 40,000 plastic balls with **50,000 fiber optic lights** to create a moon-like atmosphere.

Color Factory's immersive interactive exhibits are experiential spaces that are inspired by each city they visit and each display is touched by local artists, creatives, designers and vendors.

Proud to be a part of this creative galaxy display, Impact lighting looks forward to more inventive lighting project contributions such as this.
